Goldman Sachs Large Cap Value Fund—Summary

Investment Objective

The Goldman Sachs Large Cap Value Fund (formerly, the Goldman Sachs Growth and Income Fund) (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold Institutional Shares of the Fund. This table does not reflect the fees and expenses associated with any variable annuity contract or variable life insurance policy that uses the Fund as an investment option. Had those fees and expenses been included, overall fees and expenses would be higher.

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.75%
Distribution and Service (12b-1) Fees	None
Other Expenses	0.06%
Total Annual Fund Operating Expenses	0.81%

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. This Example does not reflect the fees and expenses associated with any variable annuity contract or variable life insurance policy that uses the Fund as an investment option. Had those fees and expenses been included, the costs shown below would be higher.

The Example assumes that you invest \$10,000 in Institutional Shares of the Fund for the time periods indicated and then redeem all of your Institutional Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Institutional Shares	\$83	\$259	\$450	\$1,002

Portfolio Turnover

The Fund pays transaction costs when it buys and sells securities or instruments (i.e., “turns over” its portfolio). A high rate of portfolio turnover may result in increased transaction costs, including brokerage commissions, which must be borne by the Fund and its shareholders. These costs are not reflected in annual fund operating expenses or in the expense example above, but are reflected in the Fund’s performance. The Fund’s portfolio turnover rate for the fiscal year ended December 31, 2009 was 84% of the average value of its portfolio.

Fund Strategy

The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (“Net Assets”) in a diversified portfolio of equity investments in large-cap U.S. issuers with public stock market capitalizations within the range of the market capitalization of companies constituting the Russell 1000® Value Index at the time of investment. As of March 1, 2010, the capitalization range of the Russell 1000® Value Index was between \$240 million to \$309 billion. The Fund seeks its investment objective by investing in value opportunities that the Investment Adviser defines as companies with identifiable competitive advantages whose intrinsic value is not reflected in the stock price. Although the Fund will invest primarily in publicly traded U.S. securities, it may invest in foreign securities, including securities quoted in foreign currencies.

The Fund may also invest in fixed income securities, such as government, corporate and bank debt obligations.

Principal Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation (“FDIC”) or any government agency. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective.

Stock Risk. Stock prices have historically risen and fallen in periodic cycles. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future.

Market Risk. The value of the instruments in which the Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors or governments and/or general economic conditions.

Investment Style Risk. Different investment styles (e.g., “growth”, “value” or “quantitative”) tend to shift in and out of favor depending upon market and economic conditions and investor sentiment. The Fund may outperform or underperform other funds that invest in similar asset classes but employ different investment styles.

Performance

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) changes in the performance of the Fund’s Institutional Shares from year to year; and (b) how the average annual total returns of the Fund’s Institutional Shares compare to those of a broad-based securities market index. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. In addition, performance reflects Fund level expenses but does not reflect the fees and expenses associated with any variable annuity contract or variable life insurance policy that uses the Fund as an investment option for any contract or policy. Had performance reflected all of those fees and expenses, performance would have been reduced. Updated performance information is available at no cost at www.goldmansachsfunds.com/vit or by calling the phone number on the back cover of this Prospectus.

AVERAGE ANNUAL TOTAL RETURN

For the period ended December 31, 2009	1 Year	5 Years	10 Years	Since Inception
Institutional Shares (Inception 1/12/98)	18.32%	0.04%	1.27%	1.96%
Russell 1000® Value Index (reflects no deduction for fees, expenses, or taxes)	19.69%	-0.25%	2.47%	4.40%

Portfolio Management

Goldman Sachs Asset Management, L.P. is the investment adviser for the Fund (the “Investment Adviser” or “GSAM”).

Portfolio Managers: Eileen Rominger, Managing Director, Global CIO of GSAM, has managed the Fund since 1999; Andrew Braun, Managing Director, Co-Chief Investment Officer, Value Equity, has managed the Fund since 2001; Sean Gallagher, Managing Director, Co-Chief Investment Officer, Value Equity, has managed the Fund since 2001; Dolores Bamford, CFA, Managing Director, has managed the Fund since 2002; David L. Berdon, Managing Director, has managed the Fund since 2007; Sean A. Butkus, CFA, Vice President, has been managing the Fund since 2010; Scott Carroll, CFA, Managing Director, has managed the Fund since 2002; and John Arege, CFA, Vice President, has managed the Fund since 2010.

Buying and Selling Fund Shares

Fund shares are not sold directly to the public. Fund shares may be purchased and redeemed by separate accounts that fund variable annuity and variable life insurance contracts issued by participating insurance companies. Orders received from separate accounts to purchase or redeem Fund shares are effected on business days. Individual investors may purchase or redeem Fund shares indirectly through variable annuity contracts and variable life insurance policies offered through the separate accounts.

Institutional Shares are generally not available for purchase by current or prospective investors at this time. However, the Fund may resume sales of Institutional Shares at a later date.

Tax Information

Provided that the Fund and separate accounts investing in the Fund satisfy applicable tax requirements, the Fund will not be subject to federal tax. Special tax rules apply to life insurance companies, variable annuity contracts and variable life insurance contracts. For information on federal income taxation of owners of variable annuity or variable life insurance contracts, see the prospectus for the applicable contract.

Payments to Broker-Dealers and Other Financial Intermediaries

The Fund and/or its related companies may pay participating insurance companies and securities dealers for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the insurance company and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your insurance company’s website for more information.

Investment Management Approach

INVESTMENT OBJECTIVE

The Fund seeks long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests, under normal circumstances, at least 80% of its Net Assets in a diversified portfolio of equity investments in large cap U.S. issuers with public stock market capitalizations (based upon shares available for trading on an unrestricted basis) within the range of the market capitalization of companies constituting the Russell 1000® Value Index at the time of investment. To the extent required by Securities and Exchange Commission (“SEC”) regulations, shareholders will be provided with sixty days notice in the manner prescribed by the SEC before any change in the Fund’s policy to invest at least 80% of its Net Assets in the particular type of investment suggested by its name. If the market capitalization of a company held by the Fund moves outside this range, the Fund may, but is not required to, sell the securities. As of March 1, 2010, the capitalization range of the Russell 1000® Value Index was between \$240 million to \$309 billion. The Fund seeks its investment objective by investing in value opportunities that the Investment Adviser defines as companies with identifiable competitive advantages whose intrinsic value is not reflected in the stock price. Although the Fund will invest primarily in publicly traded U.S. securities, it may invest up to 25% of its Net Assets in foreign securities, including securities quoted in foreign currencies.

The Fund may invest up to 20% of its Net Assets in fixed income securities, such as government, corporate and bank debt obligations.

The Russell 1000® Value Index is a market capitalization weighted index of the 1,000 largest U.S. companies with lower price-to-book ratios and higher forecasted growth values.

The Fund may, from time to time, take temporary defensive positions in attempting to respond to adverse market, political or other conditions. For temporary defensive purposes, the Fund may invest a certain percentage of its total assets in U.S. government securities, commercial paper rated at least A-2 by Standard & Poor’s Rating Group (“Standard & Poor’s”), P-2 by Moody’s Investors Service, Inc. (“Moody’s”) or having a comparable rating by another nationally recognized statistical rating organization (“NRSRO”), certificates of deposit, bankers’ acceptances, repurchase agreements, non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year, cash, cash equivalents and certain exchange-traded funds (“ETFs”). When the

Fund’s assets are invested in such instruments, the Fund may not be achieving its investment objective.

The Fund’s investment objective and principal investment strategies described above are not fundamental and may be changed without shareholder approval.

GSAM’s Value Investment Philosophy:

Through intensive, firsthand fundamental research our portfolio team seeks to identify quality businesses selling at compelling valuations.

1. *Businesses represent compelling value when:*

- Market uncertainty exists.
- Their economic value is not recognized by the market.

2. *By quality, we mean companies that have:*

- Sustainable operating or competitive advantage.
- Excellent stewardship of capital.
- Capability to earn above their cost of capital.
- Strong or improving balance sheets and cash flow.

Business quality, conservative valuation and thoughtful portfolio construction are the key elements of our value approach.

References in this Prospectus to the Fund’s benchmark are for informational purposes only, and unless otherwise noted are not an indication of how the Fund is managed.

SHARE OFFERING

Goldman Sachs Variable Insurance Trust (the “Trust”) offers shares of the Fund to separate accounts of participating insurance companies for the purpose of funding variable annuity contracts and variable life insurance policies. Institutional Shares of the Fund are not offered directly to the public. The participating insurance companies, not the owners of the variable annuity contracts or variable life insurance policies or participants therein, are shareholders of the Fund. The Fund pools the monies of these separate accounts and invests these monies in a portfolio of securities pursuant to the Fund’s stated investment objective.

The investment objective and policies of the Fund are similar to the investment objectives and policies of other mutual funds that the Investment Adviser manages. Although the objectives and policies may be similar, the investment results of the Fund may be higher or lower than the results of such other mutual funds. The Investment Adviser cannot guarantee, and makes no representation, that the investment results of similar funds

will be comparable even though the funds have the same Investment Adviser.

ADDITIONAL PERFORMANCE INFORMATION

Note that the “Best Quarter” and “Worst Quarter” figures shown in the “Performance” section of the Fund’s Summary section are applicable only to the time period covered by the bar chart.

OTHER INVESTMENT PRACTICES AND SECURITIES

The tables below identify some of the investment techniques that may (but are not required to) be used by the Fund in seeking to achieve its investment objective. Numbers in the tables show allowable usage only; for actual usage, consult the Fund’s annual/semi-annual reports. For more information about these and other investment practices and securities, see Appendix A. The Fund publishes on its website (<http://www.goldmansachs.com>) complete portfolio holdings for the Fund as of the end of each calendar quarter subject to a fifteen calendar-day lag between the date of the information and the date on which the information is disclosed. In addition, the Fund publishes on its website month-end top ten holdings subject to a fifteen calendar-day lag between the date of the information and the date on which the information is disclosed. This information will be available on the website until the date on which the Fund files its next quarterly portfolio holdings report on Form N-CSR or Form N-Q with the SEC. In addition, a description of the Fund’s policies and procedures with respect to the disclosure of its portfolio holdings is available in the Fund’s Statement of Additional Information (“SAI”).

* Limited to 15% of net assets (together with other illiquid securities) for all structured securities and swap transactions that are not deemed liquid.

** Limited by the amount the Fund invests in foreign securities.

*** This percentage limitation does not apply to the Fund’s investments in investment companies (including ETFs) where a higher percentage limitation is permitted under the terms of an SEC exemptive order or SEC exemptive rule.

¹ The Fund may purchase and sell call and put options on foreign currencies.

² The Fund may sell covered call and put options and purchase call and put options on securities and securities indices in which it may invest.

³ Limited by the amount the Fund invests in fixed income securities.

⁴ The Fund uses the same rating criteria for convertible and non-convertible debt securities.

⁵ The Fund may invest in the aggregate up to 25% of its Net Assets in foreign securities, including emerging country securities.

⁶ Except as noted under “Non-Investment Grade Fixed Income Securities,” fixed income securities must be investment grade (i.e., rated BBB or higher by Standard & Poor’s, Baa or higher by Moody’s or have a comparable rating by another NRSRO).

⁷ May be rated BB or lower by Standard & Poor’s, Ba or lower by Moody’s or have a comparable rating by another NRSRO at the time of investment.

Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any other governmental agency. The principal risks of the Fund are discussed in the Summary section of this Prospectus. The following gives additional information on the risks that apply to the Fund and may result in a loss of your investment. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective.

✓ PRINCIPAL RISK • ADDITIONAL RISK														
Fund	Credit/Default	Derivatives	Emerging Countries	Foreign	Geographic	Interest Rate	Investment Style	IPO	Liquidity	Management	Market	Net Asset Value ("NAV")	Non-Investment Grade Fixed Income Securities	Stock
Large Cap Value	•	•	•	•	•	•	✓	•	•	•	✓	•	•	✓

Principal Risks

- Investment Style Risk**—Different investment styles tend to shift in and out of favor depending upon market and economic conditions as well as investor sentiment. The Fund may outperform or underperform other funds that employ a different investment style. Examples of different investment styles include growth and value investing. Growth stocks may be more volatile than other stocks because they are more sensitive to investor perceptions of the issuing company's growth of earnings potential. Growth companies are often expected by investors to increase their earnings at a certain rate. When these expectations are not met, investors can punish the stocks inordinately even if earnings showed an absolute increase. Also, because growth companies usually invest a high portion of earnings in their business, growth stocks may lack the dividends of some value stocks that can cushion stock prices in a falling market. Growth oriented funds will typically underperform when value investing is in favor. Value stocks are those that are undervalued in comparison to their peers due to adverse business developments or other factors.
- Market Risk**—The risk that the value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors or governments and/or general economic conditions. Price changes may be temporary or last for extended periods. The Fund's investments may be overweighted from time to time in one or more industry sectors or countries, which will increase the Fund's exposure to risk of loss from adverse developments affecting those sectors or countries.
- Stock Risk**—The risk that stock prices have historically risen and fallen in periodic cycles. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future.

Additional Risks

- Credit/Default Risk**—The risk that an issuer or guarantor of fixed income securities held by the Fund (which may have low credit ratings) may default on its obligation to pay

interest and repay principal. The credit quality of the Fund's portfolio securities may meet the Fund's credit quality requirements at the time of purchase but then deteriorate thereafter, and such a deterioration can occur rapidly. In certain instances, the downgrading or default of a single holding or guarantor of the Fund's holding may impair the Fund's liquidity and have the potential to cause significant NAV deterioration.

- Derivatives Risk**—The risk that loss may result from the Fund's investments in options, futures, forwards, swaps, structured securities and other derivative instruments. These instruments may be illiquid, difficult to price and leveraged so that small changes may produce disproportionate losses to the Fund. Derivatives are also subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligation.
- Emerging Countries Risk**—The securities markets of most Central and South American, African, Middle Eastern, certain Asian and Eastern European and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- Foreign Risk**—The risk that when the Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions, or from problems in security registration or settlement and custody. The Fund will also be subject to the risk of

negative foreign currency rate fluctuations, which may cause the value of securities in such foreign currency (or other instruments through which the Fund has exposure to foreign currencies) to decline in value. Currency exchange rates may fluctuate significantly over short periods of time. Foreign risks will normally be greatest when the Fund invests in issuers located in emerging countries.

- **Geographic Risk**—Concentration of the investments of the Fund in issuers located in a particular country or region will subject the Fund, to a greater extent than if investments were less concentrated, to the risks of adverse securities markets, exchange rates and social, political, regulatory or economic events which may occur in that country or region.
- **Interest Rate Risk**—The risk that when interest rates increase, fixed income securities held by the Fund (including inflation protected securities) will decline in value. Long-term fixed income securities will normally have more price volatility because of this risk than short-term fixed income securities.
- **IPO Risk**—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When the Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance.
- **Liquidity Risk**—The risk that the Fund may invest to a greater degree in securities or instruments that trade in lower volumes and may make investments that may be less liquid than other investments. Also, the risk that the Fund may make investments that may become less liquid in response to market developments or adverse investor perceptions. When there is no willing buyer and investments cannot be readily sold at the desired time or price, the Fund may have to accept a lower price or may not be able to sell the security or instrument at all. An inability to sell one or more portfolio positions can adversely affect the Fund's value or prevent the Fund from being able to take advantage of other investment opportunities.

Since the Fund may invest in non-investment grade fixed income securities, small and mid-capitalization stocks, REITs, and emerging country issuers it may be especially subject to the risk that during certain periods, the liquidity

of particular issuers or industries, or all securities within a particular investment category, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions, whether or not accurate.

Liquidity risk may also refer to the risk that the Fund will not be able to pay redemption proceeds within the time period stated in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Although the Fund reserves the right to meet redemption requests through in-kind distributions, to date the Fund has not historically paid redemptions in kind. While the Fund may pay redemptions in kind in the future, the Fund may instead choose to raise cash to meet redemption requests through sales of portfolio securities or permissible borrowings. If the Fund is forced to sell securities at an unfavorable time and/or under unfavorable conditions, such sales may adversely affect the Fund's NAV.

Certain shareholders, including clients or affiliates of the Investment Adviser, may from time to time own or control a significant percentage of the Fund's shares. Redemptions by these shareholders of their shares of the Fund may further increase the Fund's liquidity risk and may impact the Fund's NAV. These shareholders may include, for example, certain participating insurance companies, accounts, or Goldman Sachs affiliates, whose buy-sell decisions are controlled by a single decision-maker.

- **Management Risk**—The risk that a strategy used by the Investment Adviser may fail to produce the intended results.
- **NAV Risk**—The risk that the NAV of the Fund and the value of your investment will fluctuate.
- **Non-Investment Grade Fixed Income Securities Risk**—The Fund may invest in non-investment grade fixed income securities (commonly known as “junk bonds”) that are considered speculative. Non-investment grade fixed income securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate or municipal developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

More information about the Fund's portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Service Providers

INVESTMENT ADVISER

Investment Adviser

Goldman Sachs Asset Management, L.P.
200 West Street
New York, New York 10282

GSAM has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman, Sachs & Co. (“Goldman Sachs”). As of December 31, 2009, GSAM, including its investment advisory affiliates, had assets under management of \$753.4 billion.

The Investment Adviser provides day-to-day advice regarding the Fund’s portfolio transactions. The Investment Adviser makes the investment decisions for the Fund and places purchase and sale orders for the Fund’s portfolio transactions in U.S. and foreign markets. As permitted by applicable law, these orders may be directed to any brokers, including Goldman Sachs and its affiliates. While the Investment Adviser is ultimately responsible for the management of the Fund, it is able to draw upon the research and expertise of its asset management affiliates for portfolio decisions and management with respect to certain portfolio securities. In addition, the Investment Adviser has access to the research and certain proprietary technical models developed by Goldman Sachs, and will apply quantitative and qualitative analysis in determining the appropriate allocations among categories of issuers and types of securities.

The Investment Adviser also performs the following additional services for the Fund:

- Supervises all non-advisory operations of the Fund
- Provides personnel to perform necessary executive, administrative and clerical services to the Fund
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and SAIs and other reports filed with the SEC and other regulatory authorities
- Maintains the records of the Fund
- Provides office space and all necessary office equipment and services

MANAGEMENT FEE AND OTHER EXPENSE INFORMATION

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to a fee, computed daily and payable monthly, at an annual rate listed below (as a percentage of the Fund’s average daily net assets):

Fund	Contractual Management Rate	Average Daily Net Assets	Actual Rate for the Fiscal Year Ended December 31, 2009
Large Cap Value	0.75%	First \$1 Billion	0.75%
	0.68%	Next \$1 Billion	
	0.65%	Next \$3 Billion	
	0.64%	Next \$3 Billion	
	0.63%	Over \$8 Billion	

The Investment Adviser may waive a portion of its management fee from time to time, and may discontinue or modify any such waiver in the future, consistent with the terms of any fee waiver arrangements in place.

A discussion regarding the basis for the Board of Trustees’ approval of the Management Agreement for the Fund in 2009 is available in the Fund’s Semi-Annual report dated June 30, 2009.

The Investment Adviser has agreed to reduce or limit “Other Expenses” (excluding management fees, transfer agency fees and expenses, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses, exclusive of any custody and transfer agent fee credit reductions) to 0.114% of the Fund’s average daily net assets through at least April 30, 2011, and prior to that date the Investment Adviser may not unilaterally terminate the arrangement. The expense limitation may be modified or terminated by the Investment Adviser at its discretion and without shareholder approval after such date, although the Investment Adviser does not presently intend to do so.

The Investment Adviser, distributor, and/or their affiliates may, from time to time, pay compensation from their own assets (and not as an additional charge to the Fund) to participating insurance companies for administrative services that such companies provide to their variable annuity and variable life insurance contract owners who are invested in the Fund and for other purposes. In addition, the Investment Adviser, distributor, and/or their affiliates may pay compensation from their own assets (and not as an additional charge to the Fund) to various securities dealers (including affiliates of participating insurance companies) (“Intermediaries”) that distribute variable annuity contracts and/or variable life insurance contracts of such companies in connection with the sale, distribution and/or servicing of such contracts. Such payments are intended to compensate Intermediaries for, among other things: marketing

shares of the Fund and other Goldman Sachs Funds, which may consist of payments relating to funds included on preferred or recommended fund lists or in certain sales programs from time to time sponsored by the Intermediaries; access to the Intermediaries' registered representatives or salespersons, including at conferences and other meetings; assistance in training and education of personnel; marketing support; and/or other specified services intended to assist in the distribution and marketing of the Fund and other Goldman Sachs Funds. The payments may also, to the extent permitted by applicable regulations, contribute to various non-cash and cash incentive arrangements to promote the sale of shares, as well as sponsor various educational programs, sales contests and/or promotions. The additional payments by the Investment Adviser, distributor and/or their affiliates may also compensate Intermediaries for subaccounting, administrative and/or shareholder processing services that are in addition to the fees paid for these services by the Fund. The amount of these additional

payments is normally not expected to exceed 0.50% (annualized) of the amount sold or invested through the Intermediaries. Please refer to the "Payments to Intermediaries" section of the SAI for more information about these payments.

The payments made by the Investment Adviser, distributor and/or their affiliates may differ for different participating insurance companies and Intermediaries. The presence of these payments and the basis on which an Intermediary compensates its registered representatives or salespersons may create an incentive for a particular Intermediary, registered representative, salesperson or participating insurance company to highlight, feature, offer or recommend the Fund based, at least in part, on the level of compensation paid. You should contact your participating insurance company or Intermediary for more information about the payments they receive and any potential conflicts of interest.

FUND MANAGERS

Value Investment Team

- Stable investment team that, on average, has two decades of industry experience
- The team is organized by industry in order to deliver depth and breadth of research expertise
- Portfolio decision makers are actively conducting the research, which brings intensity and focus to the Value Investment Team process

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Eileen Rominger Managing Director Global Chief Investor Officer, Goldman Sachs Asset Management	Portfolio Manager— Large Cap Value	Since 1999	Ms. Rominger joined the Investment Adviser as a portfolio manager and Chief Investment Officer of the Value team in August 1999. Ms. Rominger became Global Head of Fundamental Equity in 2007 and Co-Chief Investment Officer of Global Equity in 2008. In 2009, Ms. Rominger was named Global Chief Investment Officer of Goldman Sachs Asset Management. From 1981 to 1999, she worked at Oppenheimer Capital, most recently as a senior portfolio manager.
Andrew Braun Managing Director Co-Chief Investment Officer, Value Equity	Portfolio Manager— Large Cap Value	Since 2001	Mr. Braun joined the Investment Adviser as a mutual fund product development analyst in July 1993. From January 1997 to April 2001, he was a research analyst on the Value team, and he became a portfolio manager in May 2001.
Sean Gallagher Managing Director Co-Chief Investment Officer, Value Equity	Portfolio Manager— Large Cap Value	Since 2001	Mr. Gallagher joined the Investment Adviser as a research analyst in May 2000. He became a portfolio manager in December 2001. From October 1993 to May 2000, he was a research analyst at Merrill Lynch Asset Management.
Dolores Bamford, CFA Managing Director	Portfolio Manager— Large Cap Value	Since 2002	Ms. Bamford joined the Investment Adviser as a portfolio manager for the Value team in April 2002. Prior to that, she was a portfolio manager at Putnam Investments for various products since 1991.
David L. Berdon Managing Director	Portfolio Manager— Large Cap Value	Since 2007	Mr. Berdon joined the Investment Adviser as a research analyst in March 2001 and became a portfolio manager in October 2002. From September 1999 to March 2001, he was a Vice President for Business Development and Strategic Alliances at Soliloquy Inc.
Sean A. Butkus, CFA Vice President	Portfolio Manager— Large Cap Value	Since 2010	Mr. Butkus joined the Investment Adviser as a research analyst on the Value team in July 2004 and became a portfolio manager in 2006. Previously, he worked on the Business Planning Team of the Investment Management Division at Goldman Sachs. Before joining Goldman Sachs in 1998, he worked at Arthur Andersen LLP.
Scott Carroll, CFA Managing Director	Portfolio Manager— Large Cap Value	Since 2002	Mr. Carroll joined the Investment Adviser as a portfolio manager for the Value team in May 2002. From 1996 to 2002, he worked at Van Kampen Funds where he had portfolio management and analyst responsibilities for Growth and Income and Equity Income funds.
John Arege, CFA Vice President	Portfolio Manager— Large Cap Value	Since 2010	Mr. Arege joined the Investment Adviser in 2006 as a Portfolio Manager on the Core Equity team and later joined the US Value team as a Portfolio Manager in 2007. From 1999 to 2006 he worked at Merrill Lynch Investment Managers where he was a senior analyst on the Value team.

Andrew Braun and Sean Gallagher serve as Co-Chief Investment Officers of the Value Investment Team. The other portfolio managers serve as primary research analysts for particular industries. While the entire team debates investment ideas and overall portfolio structure, the final buy/sell decision for a particular security resides primarily with the portfolio manager responsible for that particular industry. As Co-Chief Investment Officers of the team, Mr. Braun and Mr. Gallagher are ultimately responsible for the composition of the Fund's portfolio structure at both the stock and industry level.

For information about the portfolio managers' compensation, other accounts managed by the portfolio managers and the portfolio managers' ownership of securities in the Fund, see the SAI.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 200 West Street, New York, New York 10282, serves as the exclusive distributor (the “Distributor”) of the Fund’s shares. Goldman Sachs, 71 S. Wacker Drive, Chicago, Illinois 60606, also serves as the Fund’s transfer agent (the “Transfer Agent”) and, as such, performs various shareholder servicing functions.

For its transfer agency services, Goldman Sachs is entitled to receive a transfer agency fee equal, on an annualized basis, to 0.02% of average daily net assets with respect to the Institutional Shares.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to the Fund or limit the Fund’s investment activities. Goldman Sachs is a full service investment banking, broker dealer, asset management and financial services organization and a major participant in global financial markets. As such, it acts as an investor, investment banker, research provider, investment manager, financier, advisor, market maker, trader, prime broker, lender, agent and principal, and has other direct and indirect interests, in the global fixed income, currency, commodity, equity and other markets in which the Fund directly and indirectly invests. Thus, it is likely that the Fund will have multiple business relationships with and will invest in, engage in transactions with, make voting decisions with respect to, or obtain services from entities for which Goldman Sachs performs or seeks to perform investment banking or other services. The Investment Adviser and/or certain of its affiliates are the managers of the Goldman Sachs Funds. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Fund and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Fund. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Fund. Goldman Sachs may restrict transactions for itself, but not for the Fund (or vice versa). The results of the Fund’s investment activities, therefore, may differ from those of Goldman Sachs, its affiliates and other accounts managed by Goldman Sachs,

and it is possible that the Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Fund may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. For example, the Fund may take a long position in a security at the same time Goldman Sachs or other accounts managed by the Investment Adviser take a short position in the same security (or vice versa). These and other transactions undertaken by Goldman Sachs, its affiliates or Goldman Sachs–advised clients may adversely impact the Fund. Transactions by one or more Goldman Sachs–advised clients or the Investment Adviser may have the effect of diluting or otherwise disadvantaging the values, prices or investment strategies of the Fund. The Fund’s activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions. As a global financial services firm, Goldman Sachs also provides a wide range of investment banking and financial services to issuers of securities and investors in securities. Goldman Sachs, its affiliates and others associated with it may create markets or specialize in, have positions in and affect transactions in, securities of issuers held by the Fund, and may also perform or seek to perform investment banking and financial services for those issuers. Goldman Sachs and its affiliates may have business relationships with and purchase or distribute or sell services or products from or to distributors, consultants or others who recommend the Fund or who engage in transactions with or for the Fund. For more information about conflicts of interest, see the SAI.

Under a securities lending program approved by the Fund’s Board of Trustees, the Fund may retain an affiliate of the Investment Adviser to serve as the securities lending agent for the Fund to the extent that the Fund engages in the securities lending program. For these services, the lending agent may receive a fee from the Fund, including a fee based on the returns earned on the Fund’s investment of the cash received as collateral for the loaned securities. The Board of Trustees periodically reviews all portfolio securities loan transactions for which the affiliated lending agent has acted as lending agent. In addition, the Fund may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Fund’s portfolio investment transactions, as permitted by applicable law.

Dividends

Distributions from investment company taxable income and distributions from net realized capital gains (if any) are declared and paid by the Fund at least annually. Over the course of the year, accrued and paid distributions will equal all or substantially all of the Fund's investment company taxable income and net realized capital gains. All distributions paid on Institutional Shares will be automatically reinvested in additional Institutional Shares of the Fund at the NAV of such

shares on the payment date, unless an insurance company's separate account is permitted to hold cash and elects to receive payment in cash. From time to time, a portion of the Fund's distributions may constitute a return of capital for tax purposes, and/or may include amounts in excess of the Fund's net investment income for the period in accordance with good accounting practice.

Shareholder Guide

The following section will provide you with answers to some of the most frequently asked questions regarding buying and selling the Fund's Institutional Shares.

How Can I Purchase Or Sell Institutional Shares Of The Fund?

Institutional Shares of the Fund are not sold directly to the public. Instead, Fund shares are sold to separate accounts that fund variable annuity and variable life insurance contracts issued by participating insurance companies. You may purchase or sell (redeem) shares of the Fund through variable annuity contracts and variable life insurance policies offered through the separate accounts. The variable annuity contracts and variable life insurance policies are described in the separate prospectuses issued by the participating insurance companies. You should refer to those prospectuses for information on how to purchase a variable annuity contract or variable life insurance policy, how to select a specific Fund as an investment option for your contract or policy and how to redeem monies from the Fund.

The separate accounts of the participating insurance companies place orders to purchase and redeem shares of the Fund based on, among other things, the amount of premium payments to be invested and the amount of surrender and transfer requests (as defined in the prospectus describing the variable annuity contracts and variable life insurance policies issued by the participating insurance companies) to be effected on that day pursuant to variable annuity contracts and variable life insurance policies.

Shares of the Fund may be purchased by separate accounts of both affiliated and unaffiliated participating insurance companies in order to fund both variable annuity and variable life insurance contracts, and also may be purchased by qualified plans. This may present certain conflicts of interests among variable annuity owners, variable life insurance policy owners and plan investors. The Trust's Board of Trustees will monitor the Trust for the existence of any material irreconcilable conflict of interest. The Trust currently does not foresee any disadvantages to the holders of variable annuity contracts and variable life insurance policies arising from the fact that interests of the holders of variable annuity contracts and variable life insurance policies may differ due to differences of tax treatment or other considerations or due to conflicts among the participating insurance companies. If, however, a material irreconcilable conflict arises between the holders of variable annuity contracts and variable life insurance policies of participating insurance companies, a participating insurance company may be required to withdraw the assets allocable to some or all of the separate accounts from the Fund. Any such

withdrawal could disrupt orderly portfolio management to the potential detriment of such holders.

Shares of the Fund (and other existing and new funds that might be added to the Trust) may also be offered to:

- Unregistered separate accounts of various participating insurance companies through which variable annuity contracts and variable life insurance policies are sold in non-public offerings.
- Unregistered separate accounts of various participating insurance companies through which variable annuity contracts and variable life insurance policies are offered exclusively to qualified pension and profit-sharing plans and/or certain governmental plans.
- Qualified pension and profit-sharing plans. The Trust does not currently anticipate offering shares directly to such plans.

In addition to Institutional Shares, the Fund offers another class of shares. This other share class is subject to different fees and expenses (which affect performance) and is entitled to different services than Institutional Shares. Information regarding this other share class can be obtained from Goldman Sachs by calling the number on the back cover of this Prospectus.

How Are Shares Priced?

Institutional Shares of the Fund are purchased and sold at the Fund's next determined NAV for its Institutional Share class *after* the Fund receives the order in proper form. The class calculates its NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

The Fund's investments are valued based on market quotations, or if market quotations are not readily available, or if the Investment Adviser believes that such quotations do not accurately reflect fair value, the fair value of the Fund's investments may be determined in good faith under procedures established by the Board of Trustees.

In the event the Fund invests in foreign equity securities, "fair value" prices, if available, are provided by an independent fair value service in accordance with the fair value procedures approved by the Board of Trustees. Fair value prices are used because many foreign markets operate at times that do not coincide with those of the major U.S. markets. Events that could affect the values of foreign portfolio holdings may occur between the close of the foreign market and the time of determining the NAV, and would not otherwise be reflected in the NAV. If the independent fair value service does not provide a fair value price for a particular security, or if the price

provided does not meet the established criteria for the Fund, the Fund will price that security at the most recent closing price for that security on its principal exchange.

In addition, the Investment Adviser, consistent with its procedures and applicable regulatory guidance, may (but need not) determine to make an adjustment to the previous closing prices of either domestic or foreign securities in light of significant events, to reflect what it believes to be the fair value of the securities at the time of determining the Fund's NAV. Significant events that could affect a large number of securities in a particular market may include, but are not limited to: situations relating to one or more single issuers in a market sector; significant fluctuations in U.S. or foreign markets; market dislocations; market disruptions or market closings; equipment failures; natural or man made disasters or acts of God; armed conflicts; governmental actions or other developments; as well as the same or similar events which may affect specific issuers or the securities markets even though not tied directly to the securities markets. Other significant events that could relate to a single issuer may include, but are not limited to: corporate actions such as reorganizations, mergers and buy-outs; corporate announcements, including those relating to earnings, products and regulatory news; significant litigation; low trading volume; and trading limits or suspensions.

One effect of using an independent fair value service and fair valuation may be to reduce stale pricing arbitrage opportunities presented by the pricing of Fund shares. However, it involves the risk that the values used by the Fund to price its investments may be different from those used by other investment companies and investors to price the same investments.

Investments in other registered mutual funds (if any) are valued based on the NAV of those mutual funds (which may use fair value pricing as discussed in their prospectuses).

Please note the following with respect to the price at which your transactions are processed:

- NAV per share of each share class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such other times as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- The Trust reserves the right to reprocess purchase (including dividend reinvestments), redemption and exchange transactions that were processed at a NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV, as adjusted.

- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Consistent with industry practice, investment transactions not settling on the same day are recorded and factored into the Fund's NAV on the business day following trade date (T+1). The use of T+1 accounting generally does not, but may, result in a NAV that differs materially from the NAV that would result if all transactions were reflected on their trade dates.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than its regularly scheduled closing time. In the event the New York Stock Exchange does not open for business, the Trust may, but is not required to, open the Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether the Fund is open for business during this situation, please call the phone number on the back cover of this prospectus.

Foreign securities may trade in their local markets on days the Fund is closed. As a result, if the Fund holds foreign securities, its NAV may be impacted on days when investors may not purchase or redeem Fund shares.

Do I Have To Pay Any Fees When Purchasing Or Selling Institutional Shares Of The Fund?

The Fund does not charge any fees when it sells or redeems its shares. Surrender charges, mortality and expense risk fees and other charges may be assessed by participating insurance companies under the variable annuity contracts or variable life insurance policies. These fees should be described in the participating insurance companies' prospectuses.

What Else Should I Know About Institutional Share Purchases And Redemptions?

The Trust reserves the right to:

- Suspend the right of redemption under certain extraordinary circumstances in accordance with the rules of the SEC.
- Suspend the offering of shares for a period of time.
- Reject any purchase order.
- Close the Fund to new investors from time to time and reopen the Fund whenever it is deemed appropriate by the Fund's Investment Adviser.

Orders received by the Trust are effected on business days. The separate accounts purchase and redeem shares of the Fund at the Fund's NAV per share calculated as of the day an order is received by the insurance company although such purchases and redemptions may be executed the next morning. Redemption proceeds paid by wire transfer will normally be wired in federal funds on the next business day after the Trust receives

actual notice of the redemption order (for a total of one business day delay), but may be paid up to three business days after receipt of actual notice of the order.

Effective December 31, 2007, the Fund's Institutional Shares were closed to new investments from all new accounts, although a participating life insurance company that held the Fund's Institutional Shares in a separate account as of December 31, 2007 may continue to purchase the Fund's Institutional Shares for that particular account in an existing product. Newly registered products of existing participating life insurance companies or separate accounts may no longer purchase Institutional Shares of the Fund.

The Fund may resume sales of Institutional Shares to new investors at some future date. Additionally, the Fund may enter into asset purchase or other reorganization transactions with other investment companies that involve the issuance of Institutional Shares of the Fund to new accounts, and such new accounts may continue to make additional purchases and reinvest dividends and capital gains distributions into their accounts.

Notwithstanding the foregoing, the Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. The Trust and Goldman Sachs will not be liable for any loss resulting from rejected purchase or exchange orders.

What Types Of Reports Will I Be Sent Regarding Investments In The Fund?

As a holder of a variable annuity contract or variable life insurance policy, you will receive annual shareholder reports containing audited financial statements and semi-annual shareholder reports from your participating insurance company.

What Are The Fund's Voting Procedures?

Participating insurance companies, not the owners of the variable annuity contracts or variable life insurance policies or participants therein, are shareholders of the Fund. To the extent required by law:

- The participating insurance companies will vote Fund shares held in the separate accounts in a manner consistent with timely voting instructions received from the holders of variable annuity contracts and variable life insurance policies.
- The participating insurance companies will vote Fund shares held in the separate accounts for which no timely instructions are received from the holders of variable annuity contracts and variable life insurance policies, as well as shares they own, in the same proportion as those shares for which voting instructions are received.

It is anticipated that Fund shares held by unregistered separate accounts or qualified plans generally will be voted for or against any proposition in the same proportion as all other Fund shares are voted unless the unregistered separate account's participating insurance company or the plan makes other arrangements.

Additional information concerning voting rights of the participants in the separate accounts is more fully set forth in the prospectus relating to those accounts issued by the participating insurance companies.

RESTRICTIONS ON EXCESSIVE TRADING PRACTICES

Policies and Procedures on Excessive Trading Practices.

In accordance with the policy adopted by the Board of Trustees, the Trust discourages frequent purchases and redemptions of Fund shares and does not permit market timing or other excessive trading practices. Purchases and exchanges should be made with a view to longer-term investment purposes only that are consistent with the investment policies and practices of the Fund. Excessive, short-term (market timing) trading practices may disrupt portfolio management strategies, increase brokerage and administrative costs, harm Fund performance and result in dilution in the value of Fund shares held by longer-term shareholders. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any participating insurance company or other investor. The Trust and Goldman Sachs will not be liable for any loss resulting from rejected purchases or exchange orders. To minimize harm to the Trust and its shareholders (or Goldman Sachs), the Trust (or Goldman Sachs) will exercise this right if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to the Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together to the extent they can be identified. No waivers of the provisions of the policy established to detect and deter market timing and other excessive trading activity are permitted that would harm the Trust or its shareholders or would subordinate the interests of the Trust or its shareholders to those of Goldman Sachs or any affiliated person or associated person of Goldman Sachs.

Pursuant to the policy adopted by the Board of Trustees of the Trust, Goldman Sachs has developed criteria that it uses to identify trading activity that may be excessive. Goldman Sachs reviews on a regular, periodic basis available information relating to the trading activity in the Fund in order to assess the likelihood that the Fund may be the target of excessive trading. As part of its excessive trading surveillance process,

Goldman Sachs, on a periodic basis, examines transactions that exceed certain monetary thresholds or numerical limits within a period of time. Consistent with the standards described above, if, in its judgment, Goldman Sachs detects excessive, short term trading, Goldman Sachs is authorized to reject or restrict a purchase or exchange request and may further seek to close an investor's account with the Fund. Goldman Sachs may modify its surveillance procedures and criteria from time to time without prior notice regarding the detection of excessive trading or to address specific circumstances. Goldman Sachs will apply the criteria in a manner that, in Goldman Sachs' judgment, will be uniform.

Fund shares are generally held through omnibus arrangements maintained by participating insurance companies or other intermediaries. Omnibus accounts include multiple investors and such accounts typically provide the Fund with a net purchase or redemption request on any given day where the purchases and redemptions of Fund shares by the investors shares are netted against one another. The identity of individual investors whose purchase and redemption orders are aggregated are ordinarily not tracked by the Fund on a regular basis. A number of these insurance companies or intermediaries may not have the capability or may not be willing or legally able to apply the Fund's market timing policies. While

Goldman Sachs may monitor share turnover at the omnibus account level, the Fund's ability to monitor and detect market timing by shareholders in these omnibus accounts may be limited in certain circumstances, and certain of these insurance companies or intermediaries may charge the Fund a fee for providing certain shareholder information requested as part of the Fund's surveillance process. The netting effect makes it more difficult to identify, locate and eliminate market timing activities. In addition, those investors who engage in market timing and other excessive trading activities may employ a variety of techniques to avoid detection. There can be no assurance that the Fund and Goldman Sachs will be able to identify all those who trade excessively or employ a market timing strategy, and curtail their trading in every instance. If necessary, the Trust may prohibit additional purchases of Fund shares by a participating insurance company or intermediary or by certain of their customers. Insurance companies and intermediaries may also monitor their customers' trading activities in the Fund. The criteria used by insurance companies or intermediaries to monitor for excessive trading may differ from the criteria used by the Fund. If an insurance company or intermediary fails to cooperate in the implementation or enforcement of the Trust's excessive trading policies, the Trust may take certain actions including terminating the relationship.

Taxation

The Fund is treated as a separate corporate entity for federal tax purposes. The Fund has elected to be treated as a regulated investment company and intends to qualify for such treatment for each taxable year under Subchapter M of Subtitle A, Chapter 1 of the Internal Revenue Code of 1986, as amended (the “Code”). In addition, the Fund intends to qualify under the Code with respect to the diversification requirements related to variable contracts. Provided that the Fund and a separate account investing in the Fund satisfy applicable tax requirements, the Fund will not be subject to federal tax and

any distributions from the Fund to the separate account will be exempt from current federal income taxation to the extent that such distributions accumulate in a variable annuity contract or a variable life insurance contract.

Persons investing in variable annuity or variable life insurance contracts should refer to the prospectuses with respect to such contracts for further information regarding the tax treatment of the contracts and the separate accounts in which the contracts are invested.

Appendix A

Additional Information on Portfolio Risks, Securities and Techniques

A. GENERAL PORTFOLIO RISKS

The Fund will be subject to the risks associated with equity investments. “Equity investments” may include common stocks, preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments (such as swaps and futures contracts) that have economic characteristics similar to equity securities. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of the equity investments that the Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. This volatility means that the value of your investment in the Fund may increase or decrease. In recent years, certain stock markets have experienced substantial price volatility. To the extent the Fund’s net assets decrease or increase in the future due to price volatility or share redemption or purchase activity, the Fund’s expense ratio may correspondingly increase or decrease from the expense ratio disclosed in this Prospectus.

To the extent it invests in fixed income securities, the Fund will also be subject to the risks associated with fixed income securities. These risks include interest rate risk, credit/default risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed income securities tends to decline. Credit/default risk involves the risk that an issuer or guarantor could default on its obligations, and the Fund will not recover its investment. Call risk and extension risk are normally present in mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can

result in losses to investors. The same would be true of asset-backed securities, such as securities backed by car loans.

The Fund may invest in non-investment grade fixed income securities (commonly known as “junk bonds”), which are rated below investment grade (or determined to be of equivalent quality, if not rated) at the time of purchase and are therefore considered speculative. Because non-investment grade fixed income securities are issued by issuers with low credit ratings, they pose a greater risk of default than investment grade securities.

The Investment Adviser will not consider the portfolio turnover rate a limiting factor in making investment decisions for the Fund. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by the Fund and its shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of the Fund’s portfolio securities, excluding securities having a maturity at the date of purchase of one year or less. See “Financial Highlights” in Appendix B for a statement of the Fund’s historical portfolio turnover rates.

The following sections provide further information on certain types of securities and investment techniques that may be used by the Fund, including their associated risks. Additional information is provided in the SAI, which is available upon request. Among other things, the SAI describes certain fundamental investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment objectives and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in the Fund’s investment objective, you should consider whether the Fund remains an appropriate investment in light of your then current financial position and needs.

B. OTHER PORTFOLIO RISKS

Additional Risks of the Fund

Risks of Derivative Investments. The Fund may invest in derivative instruments including without limitation, options, futures, options on futures, swaps, structured securities and forward contracts and other derivatives relating to foreign currency transactions. Investments in derivative instruments may be for both hedging and nonhedging purposes (that is, to seek to increase total return, although suitable derivative instruments may not always be available to the Investment Adviser for these purposes). Losses from investments in derivative instruments can result from a lack of correlation between changes in the value of derivative instruments and the portfolio

assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, the failure of the counterparty to perform its contractual obligations, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the Investment Adviser is incorrect in its expectation of the timing or level of fluctuations in securities prices, interest rates or currency prices. Investments in derivative instruments may be harder to value, subject to greater volatility and more likely subject to changes in tax treatment than other investments. For these reasons, the Investment Adviser's attempts to hedge portfolio risks through the use of derivative instruments may not be successful, and the Investment Adviser may choose not to hedge certain portfolio risks. Investing for nonhedging purposes is considered a speculative practice and presents even greater risk of loss.

Risks of Foreign Investments. The Fund may make foreign investments. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (e.g., currency blockage). A decline in the exchange rate of the currency (i.e., weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which the Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to shareholders or converted to U.S. dollars, the Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States, and the legal remedies for investors may be more limited than the remedies available in the United

States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of the Fund's assets in one or a few countries and currencies will subject the Fund to greater risks than if the Fund's assets were not geographically concentrated.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs"). The Fund may also invest in European Depositary Receipts ("EDRs") or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are primarily traded outside of the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Emerging Countries. The Fund may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, the Middle East, Eastern Europe, Central and South America and Africa. The Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of the Fund, the Investment Adviser, its affiliates and their respective clients and other service providers. The Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For

example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by the Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), the Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

The Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return to the Fund from an investment in issuers in such countries.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve the Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for the Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by the Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make the Fund's investments in such countries less liquid and more volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). The Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, the Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Investments in emerging countries may be more difficult to value precisely because of the characteristics discussed above and lower trading volumes.

The Fund's use of foreign currency management techniques in emerging countries may be limited. The Investment Adviser currently anticipates that all or a significant portion of the Fund's currency exposure in emerging countries may not be covered by these techniques.

Foreign Custody Risk. The Fund may invest in foreign securities and may hold such securities and cash with foreign banks, agents, and securities depositories appointed by the Fund's custodian (each a "Foreign Custodian"). Some Foreign

Custodians may be recently organized or new to the foreign custody business. In some countries, Foreign Custodians may be subject to little or no regulatory oversight over or independent evaluation of their operations. Further, the laws of certain countries may place limitations on the Fund's ability to recover its assets if a Foreign Custodian enters bankruptcy. Investments in emerging markets may be subject to even greater custody risks than investments in more developed markets. Custody services in emerging market countries are very often undeveloped and may be considerably less well regulated than in more developed countries, and thus may not afford the same level of investor protection as would apply in developed countries.

Risks of Illiquid Securities. The Fund may invest up to 15% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so called "4(2) commercial paper" or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 ("144A Securities").

Investing in 144A Securities may decrease the liquidity of the Fund's portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be significant, from the market price of comparable securities for which a liquid market exists.

Securities purchased by the Fund, particularly debt securities and over-the-counter traded securities, that are liquid at the time of purchase may subsequently become illiquid due to events relating to the issuer of the securities, markets events, economic conditions or investor perceptions. Domestic and foreign markets are becoming more and more complex and interrelated, so that events in one sector of the market or the economy, or in one geographical region, can reverberate and have negative consequences for other market, economic or regional sectors in a manner that may not be reasonably foreseen. With respect to over-the-counter traded securities, the continued viability of any over-the-counter secondary market depends on the continued willingness of dealers and other participants to purchase the securities.

If one or more securities in the Fund's portfolio become illiquid, the Fund may exceed its 15% limitation in illiquid securities. In the event that changes in the portfolio or other external events cause the investments in illiquid instruments to exceed 15% of the Fund's net assets, the Fund must take steps to bring the aggregate amount of illiquid instruments back within the prescribed limitations as soon as reasonably practicable. This requirement would not force the Fund to liquidate any portfolio instrument where the Fund would suffer a loss on the sale of that instrument.

In cases where no clear indication of the value of the Fund's portfolio securities is available, the portfolio instruments will be valued at their fair value according to the valuation procedures approved by the Board of Trustees. These cases include, among others, situations where the secondary markets on which an instrument has previously been traded are no longer viable for lack of liquidity. For more information on fair valuation, please see "Shareholder Guide—How Are Shares Priced?"

Credit/Default Risks. Debt securities purchased by the Fund may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign governments, domestic and foreign corporations, banks and other issuers. Some of these fixed income securities are described in the next section below. Further information is provided in the SAI.

Debt securities rated BBB or higher by Standard & Poor's or Baa or higher by Moody's or having a comparable rating by another NRSRO are considered "investment grade." Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken the issuers' capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the Investment Adviser to be of comparable credit quality. A security satisfies the Fund's minimum rating requirement regardless of its relative ranking (for example, plus or minus) within a designated major rating category (for example, BBB or Baa). If a security satisfies the Fund's minimum rating requirement at the time of purchase and is subsequently downgraded below that rating, the Fund will not be required to dispose of the security. If a downgrade occurs, the Investment Adviser will consider what action, including the sale of the security, is in the best interest of the Fund and its shareholders.

The Fund may invest in fixed income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as “junk bonds.” Junk bonds are considered speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in the Fund’s portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Risks of IPOs. The Fund may invest in IPOs. An IPO is a company’s first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When the Fund’s asset base is small, a significant portion of the Fund’s performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund’s assets grow, the effect of the Fund’s investments in IPOs on the Fund’s performance probably will decline, which could reduce the Fund’s performance. Because of the price volatility of IPO shares, the Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of the Fund’s portfolio and may lead to increased expenses to the Fund, such as commissions and transaction costs. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that the Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for the Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Temporary Investment Risks. The Fund may, for temporary defensive purposes, invest a certain percentage of its total assets in:

- U.S. government securities
- Commercial paper rated at least A-2 by Standard & Poor’s, P-2 by Moody’s or having a comparable rating by another NRSRO

- Certificates of deposit
- Bankers’ acceptances
- Repurchase agreements
- Non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year
- Cash
- Cash equivalents
- Certain ETFs

When the Fund’s assets are invested in such instruments, the Fund may not be achieving its investment objective.

Risks of Large Shareholder Redemptions. Certain participating insurance companies, accounts, or Goldman Sachs affiliates may from time to time own (beneficially or of record) or control a significant percentage of the Fund’s shares. Redemptions by these participating insurance companies or accounts of their holdings in the Fund may impact the Fund’s liquidity and NAV. These redemptions may also force the Fund to sell securities, which may negatively impact the Fund’s brokerage costs.

C. PORTFOLIO SECURITIES AND TECHNIQUES

This section provides further information on certain types of securities and investment techniques that may be used by the Fund, including their associated risks.

The Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund’s investment objective and policies. Further information is provided in the SAI, which is available upon request.

U.S. Government Securities. The Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (i) the full faith and credit of the U.S. Treasury; (ii) the right of the issuer to borrow from the U.S. Treasury; (iii) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (iv) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components are traded independently. U.S. Government Securities may also include Treasury inflation-protected securities whose principal value is periodically adjusted according to the rate of inflation.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by

an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds. U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Custodial Receipts and Trust Certificates. The Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. government securities or other types of securities in which the Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes, the Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, the Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. The Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. The Fund may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. Mortgage-backed securities can be backed by either fixed rate mortgage loans or adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity.

The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates. The value of these securities may also fluctuate in response to the market's perception of the creditworthiness of the issuers. Early repayment of principal on mortgage- or asset-backed securities may expose the Fund to the risk of earning a lower rate of return upon reinvestment of principal.

Privately-issued mortgage pass-through securities generally offer a higher yield than similar securities issued by a

government entity because of the absence of any direct or indirect government or agency payment guarantees. However, timely payment of interest and principal on mortgage loans in these pools may be supported by various other forms of insurance or guarantees, including individual loan, pool and hazard insurance, subordination and letters of credit. There is no guarantee that private guarantors or insurers, if any, will meet their obligations. Such insurance and guarantees may be issued by private insurers, banks and mortgage poolers. Mortgage-Backed Securities without insurance or guarantees may also be purchased by the Fund if they have the required rating from an NRSRO. Some mortgage-backed securities issued by private organizations may not be readily marketable, may be more difficult to value accurately and may be more volatile than similar securities issued by a government entity.

Mortgage-backed securities may include multiple class securities, including collateralized mortgage obligations ("CMOs") and Real Estate Mortgage Investment Conduit ("REMIC") pass-through or participation certificates. A REMIC is a CMO that qualifies for special tax treatment under the Code and invests in certain mortgages principally secured by interests in real property and other permitted investments. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other mortgage-backed securities. CMOs are issued in multiple classes each with a specified fixed or floating interest rate and a final scheduled distribution date. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full.

Sometimes, however, CMO classes are "parallel pay," *i.e.*, payments of principal are made to two or more classes concurrently. In some cases, CMOs may have the characteristics of a stripped mortgage-backed securities whose price can be highly volatile. CMOs may exhibit more or less price volatility and interest rate risk than other types of mortgage-backed securities, and under certain interest rate and payment scenarios, the Fund may fail to recoup fully its investment in certain of these securities regardless of their credit quality.

Mortgage-backed securities also include stripped mortgage-backed securities ("SMBS"), which are derivative multiple class mortgage-backed securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most

of the interest from mortgage loans are generally higher than prevailing market yields on other mortgage-backed securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped. Throughout 2008, the market for mortgage-backed securities began experiencing substantially, often dramatically, lower valuations and greatly reduced liquidity. Markets for other asset-backed securities have also been affected. These instruments are increasingly subject to liquidity constraints, price volatility, credit downgrades and unexpected increases in default rates and, therefore, may be more difficult to value and more difficult to dispose of than previously. These events may have an adverse effect on the Fund to the extent it invests in mortgage-backed or other fixed income securities or instruments affected by the volatility in the fixed income markets.

Asset-Backed Securities. The Fund may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities may also include home equity line of credit loans and other second-lien mortgages. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, the Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by mortgage-backed securities. This is because asset-backed securities generally do not have the benefit of a security interest in collateral that is comparable to mortgage assets. Some asset-backed securities have only a subordinated claim or security interest in collateral. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, the Fund will be unable to possess and sell the underlying collateral and that the Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, the Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed. There is no guarantee that private guarantors, or insurers of an asset-backed security, if any, will meet their obligations. The value of some asset-backed securities may be particularly sensitive to changes in prevailing interest rates. Asset-backed securities may also be subject to increased volatility and may become illiquid and more difficult to value

even when there is no default or threat of default due to the market's perception of the creditworthiness of the issuers and market conditions impacting asset-backed securities more generally.

Bank Obligations. The Fund may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits, bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry.

Corporate Debt Obligations. The Fund may invest in corporate debt obligations and convertible securities. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of corporations to pay interest and repay principal, and include securities issued by banks and other financial institutions. The Fund may invest in corporate debt obligations issued by U.S. and certain non-U.S. issuers which issue securities denominated in the U.S. dollar (including Yankee and Euro obligations). In addition to obligations of corporations, corporate debt obligations include securities issued by banks and other financial institutions and supranational entities (i.e., the World Bank, the International Monetary Fund, etc.).

Convertible Securities. The Fund may invest in convertible securities. Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. Convertible securities in which the Fund invests are subject to the same rating criteria as its other investments in fixed income securities. Convertible securities have both equity and fixed income risk characteristics. Like all fixed income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the

market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Structured Securities. The Fund may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, securities, interest rates, commodities, indices or other financial indicators (the “Reference”) or the relative change in two or more References. Investments in structured securities may provide exposure to certain securities or markets in situations where regulatory or other restrictions prevent direct investments in such issuers or markets.

The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference, effectively leveraging the Fund’s investment so that small changes in the value of the Reference may result in disproportionate gains or losses to the Fund. Consequently, structured securities may present a greater degree of market risk than many types of securities and may be more volatile, less liquid and more difficult to price accurately than less complex securities. Structured securities are also subject to the risk that the issuer of the structured securities may fail to perform its contractual obligations. Certain issuers of structured products may be deemed to be investment companies as defined in the Investment Company Act of 1940, as amended (the “Act”). As a result, the Fund’s investments in structured securities may be subject to the limits applicable to investments in other investment companies.

Structured securities may also include equity linked notes. An equity linked note is a note whose performance is tied to a single stock, a stock index or a basket of stocks. Equity linked notes combine the principal protection normally associated with fixed income investments with the potential for capital appreciation normally associated with equity investments. Upon the maturity of the note, the holder generally receives a return of principal based on the capital appreciation of the linked securities. Depending on the terms of the note, equity linked notes may also have a “cap” or “floor” on the maximum principal amount to be repaid to holders, irrespective of the performance of the underlying linked securities. For example, a note may guarantee the repayment of the original principal

amount invested (even if the underlying linked securities have negative performance during the note’s term), but may cap the maximum payment at maturity at a certain percentage of the issuance price or the return of the underlying linked securities. Alternatively, the note may not guarantee a full return on the original principal, but may offer a greater participation in any capital appreciation of the underlying linked securities. The terms of an equity linked note may also provide for periodic interest payments to holders at either a fixed or floating rate. The secondary market for equity linked notes may be limited, and the lack of liquidity in the secondary market may make these securities difficult to dispose of and to value. Equity linked notes will be considered equity securities for purposes of the Fund’s investment objective and policies.

Foreign Currency Transactions. The Fund may, to the extent consistent with its investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. The Fund may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. In addition, the Fund may enter into foreign currency transactions to seek a closer correlation between the Fund’s overall currency exposures and the currency exposures of the Fund’s performance benchmark. The Fund may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

The Fund may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. The Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the Investment Adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (e.g., the Investment Adviser may anticipate that the foreign currency will appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time causing, along with other factors, the Fund’s NAV to fluctuate (when the Fund’s NAV fluctuates, the value of your shares may go up or down). Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the

counterparty to the contract will default on its obligations. Because these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive the Fund of unrealized profits, transaction costs or the benefits of a currency hedge or could force the Fund to cover its purchase or sale commitments, if any, at the current market price. As an investment company registered with the SEC, the Fund must “set aside” (often referred to as “asset segregation”) liquid assets, or engage in other appropriate measures to “cover” open positions with respect to its transactions in forward currency contracts.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. The Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Fund may invest or on any securities index consisting of securities in which it may invest. The Fund may also, to the extent consistent with its investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of the Investment Adviser to anticipate future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If the Investment Adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in the Fund’s investment portfolio, the Fund may incur losses that it would not otherwise incur. The use of options can also increase the Fund’s transaction costs. Options written or purchased by the Fund may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

In lieu of entering into “protective put” transactions, the Fund may engage in barrier options transactions as an alternative means to offset or hedge against a decline in the market value of the Fund’s securities. Barrier options are similar to standard options except that they become activated or are extinguished when the underlying asset reaches a predetermined level or barrier. “Down and out” barrier options are canceled or

“knocked out” if the underlying asset falls to a predetermined level. “Down and in” barrier options are activated or “knocked in” if the underlying asset falls to a predetermined level. “Up and out” barrier options are extinguished or “knocked out” if the underlying asset rises to a predetermined level. “Up and in” barrier options are activated or “knocked in” if the underlying asset rises to a predetermined level. If the Investment Adviser sets too high or too low a barrier, and the option is either extinguished or “knocked out” or the options are never activated or “knocked in,” the benefits to the Fund using a barrier option strategy may be limited and the costs associated with a barrier option strategy could be detrimental to the Fund’s performance. When writing an option, the Fund must “set aside” liquid assets, or engage in other appropriate measures to “cover” its obligation under the option contract.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. The Fund may engage in futures transactions on U.S. and foreign exchanges.

The Fund may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or, to the extent the Fund invests in foreign securities, currency exchange rates or to otherwise manage its term structure, sector selection and duration in accordance with its investment objectives and policies. The Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. The Trust, on behalf of the Fund, has claimed an exclusion from the definition of the term “commodity pool operator” under the Commodity Exchange Act and, therefore, is not subject to registration or regulation as a pool operator under that Act with respect to the Fund.

Futures contracts and related options present the following risks:

- While the Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in a poorer overall performance than if the Fund had not entered into any futures contracts or options transactions.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is

impossible to achieve, the desired protection may not be obtained and the Fund may be exposed to additional risk of loss.

- The loss incurred by the Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of the Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to the Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

The Fund must "set aside" liquid assets, or engage in other appropriate measures to "cover" open positions with respect to its transactions in futures contracts and options on futures contracts. In the case of futures contracts that do not cash settle, for example, the Fund must set aside liquid assets equal to the full notional value of the futures contracts while the positions are open. With respect to futures contracts that do cash settle, however, the Fund is permitted to set aside liquid assets in an amount equal to the Fund's daily marked-to-market net obligations (*i.e.*, the Fund's daily net liability) under the futures contracts, if any, rather than their full notional value. The Fund reserves the right to modify its asset segregation policies in the future to comply with any changes in the positions from time to time articulated by the SEC or its staff regarding asset segregation. By setting aside assets equal to only its net obligations under cash-settled futures contracts, the Fund will have the ability to employ leverage to a greater extent than if the Fund were required to segregate assets equal to the full notional amount of the futures contracts.

Preferred Stock, Warrants and Rights. The Fund may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants

and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Other Investment Companies. The Fund may invest in securities of other investment companies, including ETFs, subject to statutory limitations prescribed by the Act. These limitations include in certain circumstances a prohibition on the Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of the Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. Many ETFs, however, have obtained exemptive relief from the SEC to permit unaffiliated funds to invest in the ETFs' shares beyond these statutory limitations, subject to certain conditions and pursuant to a contractual arrangement between the ETFs and the investing funds. The Fund may rely on these exemptive orders to invest in unaffiliated ETFs.

The use of ETFs is intended to help the Fund match the total return of the particular market segments or indices represented by those ETFs, although that may not be the result. Most ETFs are passively managed investment companies whose shares are purchased and sold on a securities exchange. An ETF represents a portfolio of securities designed to track a particular market segment or index. An investment in an ETF generally presents the same primary risks as an investment in a conventional fund (*i.e.*, one that is not exchange-traded) that has the same investment objectives, strategies and policies. In addition, an ETF may fail to accurately track the market segment or index that underlies its investment objective. The price of an ETF can fluctuate, and the Fund could lose money investing in an ETF. Moreover, ETFs are subject to the following risks that do not apply to conventional funds: (i) the market price of the ETF's shares may trade at a premium or a discount to their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; and (iii) there is no assurance that the requirements of the exchange necessary to maintain the listing of an ETF will continue to be met or remain unchanged.

Pursuant to an exemptive order obtained from the SEC or under an exemptive rule adopted by the SEC, the Fund may invest in certain other investment companies and money market funds beyond the statutory limits described above. Some of those investment companies and money market funds may be funds for which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

The Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other

investment companies, in addition to the fees and expenses regularly borne by the Fund. Although the Fund does not expect to do so in the foreseeable future, the Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund.

Unseasoned Companies. The Fund may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Equity Swaps. The Fund may invest in equity swaps. Equity swaps allow the parties to a swap agreement to exchange the dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment. An equity swap may be used by the Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous.

Swaps are derivatives and their value can be very volatile. To the extent that the Investment Adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, the Fund may suffer a loss, which may be substantial. The value of some components of a swap (such as the dividends on a common stock of an equity swap) may also be sensitive to changes in interest rates. Furthermore, the Fund may suffer a loss if the counterparty defaults. Because swaps are normally illiquid, the Fund may be unable to terminate its obligations when desired. When entering into swap contracts, the Fund must “set aside” liquid assets, or engage in other appropriate measures to “cover” its obligation under the swap contract.

When-Issued Securities and Forward Commitments. The Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase

or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although the Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring securities for its portfolio, the Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate. When purchasing a security on a when-issued basis or entering into a forward commitment, the Fund must “set aside” liquid assets, or engage in other appropriate measures to “cover” its obligations.

Repurchase Agreements. Repurchase agreements involve the purchase of securities subject to the seller’s agreement to repurchase them at a mutually agreed upon date and price. The Fund may enter into repurchase agreements with securities dealers and banks which furnish collateral at least equal in value or market price to the amount of its repurchase obligation.

If the other party or “seller” defaults, the Fund might suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund’s costs associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy of the seller, the Fund could suffer additional losses if a court determines that the Fund’s interest in the collateral is not enforceable.

The Fund, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. The Fund may engage in securities lending. Securities lending involves the lending of securities owned by the Fund to financial institutions such as certain broker-dealers, including, as permitted by the SEC, Goldman Sachs. The borrowers are required to secure their loans continuously with cash, cash equivalents, U.S. government securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash collateral may be invested by the Fund in short-term investments, including registered and unregistered investment pools managed by the Investment Adviser, State Street Bank & Trust Company (“State Street”) or their affiliates and from which the

Investment Adviser, State Street or their affiliates may receive fees. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and the Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If the Investment Adviser determines to make securities loans, the value of the securities loaned may not exceed 20% of the value of the total assets of the Fund (including the loan collateral). Loan collateral (including any investment of that collateral) is not subject to the percentage limitations or nonfundamental investment policies described elsewhere in this Prospectus regarding investments in fixed income instruments and cash equivalents.

The Fund may lend its securities to increase its income. The Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Fund or becomes insolvent.

Short Sales Against-the-Box. The Fund may make short sales against-the-box. A short sale against-the-box means that at all times when a short position is open the Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Borrowings. The Fund can borrow money from banks and other financial institutions in amounts not exceeding one-third of their total assets for temporary or emergency purposes. The Fund may not make additional investments if borrowings exceed 5% of its total assets.

REITs. The Fund may invest in REITs. REITs are pooled investment vehicles that invest primarily in either real estate or real estate related loans. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. The Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Appendix B

Financial Highlights

Large Cap Value Fund — Institutional Shares

The financial highlights table is intended to help you understand the Fund's financial performance for the past five years. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions). Total return reflects Fund level expenses but does not reflect fees and expenses associated with any variable annuity contract or variable life insurance policy that uses the Fund as an investment option for any contract or policy. If total return reflected all of those fees and expenses, total return would be reduced. The information for the fiscal years ended December 31, 2009, 2008 and 2007 has been audited by PricewaterhouseCoopers LLP, whose report, along with the Fund's financial statements, is included in the Fund's most recent annual report (available upon request). The information for the fiscal years ended December 31, 2006 and 2005 has been audited by the Fund's former independent registered public accounting firm.

	Income (loss) from investment operations		Distributions to shareholders		Net asset value, end of year	Net assets, end of year (in 000s)	Ratio of net expenses to average net assets	Ratio of total expenses to average net assets	Ratio of net investment income to average net assets	Portfolio turnover rate
	Net investment income ^(c)	Net realized and unrealized gain (loss)	From net investment income	From net realized gains						
For the Fiscal Years Ended December 31,										
2009	\$0.18 ^(c)	\$ 1.28	\$(0.15)	\$ —	\$ 9.28	\$487,962	0.81%	0.81%	2.18% ^(c)	84%
2008	0.25	(4.59)	(0.22)	— ^(d)	7.97	389,838	0.81	0.81	2.36	69
2007	0.25	(0.03)	(0.26)	(1.34)	12.53	571,883	0.85	0.85	1.75	79
2006	0.28	2.43	(0.23)	(0.54)	13.91	432,016	0.86	0.87	2.15	52
2005	0.21	0.25	(0.20)	—	11.97	313,152	0.88	0.88	1.77	46

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the year; reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the year.

(c) Reflects income recognized from a special dividend which amounted to \$0.02 per share and 0.24% of average net assets.

(d) Amount is less than \$0.005 per share.
